

The PHP Classes site

gives the present

CERTIFICATE

to

JURAJ PUCHKÝ

For having ranked Number #6
in the edition of September, 2016 of the

PHP Innovation Award

for the PHP package

PHP SMS Queue System

Nomination reason: One way to send SMS messages without depending on third party APIs is to use the Gammu program. It can communicate with a mobile phone connected to your machine and sends SMS messages from the phone to whatever recipients you want. This method of sending SMS messages may not be particularly fast, especially when you have to send many SMS messages, as it has to wait for one message to be sent to send the next message. This class
